

UI PLAN – KREWE OF MUSES:

I: The four interactive elements on the website will be a **hamburger menu** for mobile use, an **accordion** to filter through information on the about page, a **pop-up ad** to inform visitors of updated membership information, and an **advice API** for the Muses daily advice.

II. The user will interact with the hamburger menu in mobile and have the ability to move to and from different pages in a simple manner. They will be able to filter through large sums of text on the about page with the accordion.

III. As a result, these events will lead to a better user experience for the site visitors.

IIII. Finally, the API that is used will be a daily advice API. When the user enters the about page, they will be see a piece of advice (from the muses) for their day. This will change daily (and with each page refresh).
